

<b>Appendix A. Usage of Symbols and Units in this Book</b>	117
A1. Symbols of elements, nuclides, radiation, etc.	117
A2. Units of energy—eV, keV, MeV, and meV	118
A3. Units of length—Angstrom ( $\text{\AA}$ ), Micron ( $\mu\text{m}$ ), Nanometer (nm), and Femtometer (or Fermi) (fm)	119
<b>Appendix B. On the Conceptual Discrimination among Theory, Model, and Hypothesis</b>	121
B1. Theory	121
B2. Model	122
B3. Hypothesis	122
<b>Appendix C. Examples of Phenomenological Analyses of Experimental Data Sets using TNCF Model</b>	123
C1. Analysis of Experimental Data Sets by Cellucci et al.	123
C2. Analysis of Experimental Data Sets by Chien et al.	127
C3. Analysis of Experimental Data Sets by Miles et al.	132
C4. Analysis of Experimental Data Sets by Clarke et al.	137

C5. Analysis of Experimental Data Sets by Okamoto et al.	143
C6. Analysis of Experimental Data Sets by Miley et al.	148
C7. Analysis of Experimental Data Sets by Dash et al.	152
C8. Analysis of Experimental Data Sets by Bressani et al.	158
<b>Appendix D. Topics on Phases of Science</b>	163
Topic 1. Electromagnetic wave, X-ray, and gamma ray	163
Topic 2. Radioactivity—unexpected things often happen	164
Topic 3. Radium and patent	165
Topic 4. Quantum born as a result of a trial-and-error	167
Topic 5. Bohr's model of the hydrogen atom	168
Topic 6. Imagination found neutron	169
Topic 7. Wonder of transition-metal hydrides	170
Topic 8. Background neutron	172
Topic 9. $1/f$ fluctuation	173
Topic 10. Chaos, fractals, and complexity	174
